

Titan 45' 4-axle THINWALL™ Dump Trailer

CUSTOM BUILT FOR:

Mitchel Transport

St. Thomas, Ontario

Titan originated the smooth-side custom aluminum trailer body, and now Titan introduces a rear-dump design tailored to comply with new harmonized codes for "road-friendly" load limits in Ontario and Quebec.

This new THINWALL™ dump design offers lower operating costs, excellent backhaul versatility and maximum durability for truckers hauling bulk grain and aggregate within and between the two provinces.

Featuring a THINWALL aluminum floor, this dump body combines outstanding strength and light weight with a smooth interior on all surfaces for clean, quick

unloading. The Titan dump requires less clean-up and maintenance and is more resistant to corrosion. The hollow-core aluminum floor also lowers the trailer's centre of gravity, providing greater stability on the road and reduced tipping risk when the hoist is up.

The smooth underside also minimizes ice build-up on winter roads for improved durability and fuel economy. With a clear 98½" interior width from end-to-end, the 45-ft THINWALL dump handles loads of more than 78 cubic yards with ample strength for heavy materials.

JOB PROFILE

- maximum gross weight capacity for Ontario and Quebec roads
- high cubic capacity for increased backhaul profitability
- low centre of gravity for improved dumping stability
- fast unloading and easy clean-out with smooth-side interior
- life-long resistance to corrosion and road salt

KEY FEATURES

- original THINWALL 1 1/2" horizontal hollow-core extruded sidewall panels
- heavy-duty THINWALL 2 1/2" hollow-core extruded floor panels
- tri-axle suspension plus self-steering forward lift axle
- all-aluminum frame and bolt-in king-pin
- stainless steel wear plate

Strength Through Innovation
