

Titan 48' 5-Axle Shortside V-Floor™ THINWALL™ Trailer

CUSTOM BUILT FOR: Asphalt & Paving Contractors

An asphalt trailer is more than a delivery vehicle – it's one link in a long-distance conveying system that, ideally, runs non-stop from plant to pavement.

Titan's new extreme-duty live floor trailer introduces the paving industry to an asphalt hauler that, finally, is designed as an integral part of the complete paving process.

Titan asphalt trailers offer the efficiency and safety of a live floor unloading system with the extreme durability to withstand harsh loads of hot mat. The V-Floor™ unloader sets a new standard for load control, walking the asphalt into the paving hopper from a level deck. The asphalt transfers evenly, eliminating segregation of the hot mat, as the operator keeps the flow rate under

complete control. By remaining level, the trailer can work on busy roadways without the worry (or costs) of hitting overhead lines and low bridges or of tipping over on sloped shoulders.

The short-sided aluminum THINWALL body minimizes tare weight to maximize payload capacity and reduce truck traffic on the job site. The lightweight smoothwall design saves fuel when the trailer is empty, so the total cost per ton or duty cycle is significantly lower. With the built-in V-Plow clean-out system, operators save even more time on every duty cycle.

The bottom line: pavers get the job done with larger loads, fewer trips, improved control, no remixing, higher safety and faster cycle times.

JOB PROFILE

- Resist high heat and abrasion of asphalt hot mat
- Unload with controlled flow rate to feed paving equipment without segregation
- Level unloading for safe, smooth operation on side slopes, under bridges or near overhead lines
- Low tare weight for maximum payloads and fuel efficiency

KEY FEATURES

- original THINWALL hollow-core extruded aluminum body panels
- "extreme-duty" V-Floor™ unloading system with remote control
- shortside body to reduce weight, wind resistance and cooling
- multi-axle configuration to suit local road limits
- V-Plow automated clean-out system
- all-aluminum and stainless steel body construction

Strength Through Innovation
