

Titan Aluminum Offset Push Pull Bumpers

Strength Through Innovation®

www.titantrailers.com

Stronger, Lighter and Versatile

Titan Trailers have developed a stronger and lighter bumper that is integrated into the overall aluminum design of the Walking floor® and Tipper Trailer product line. Welded structural aluminum uprights allow for various bumper designs to be bolted in place which creates a more versatile rear structure with easily replaceable bumper insert assemblies.

OLDER VERSIONS

Narrow steel push pull with dirt shedders with 2 hooks incorporated into bumper.

Steel pusher to accommodate centre ring style pull cable.

Narrow, steel, 5 1/4" offset push with tow hooks and shedder between bumper uprights.

Steel, flush underride, stainless clad rubber bumper blocks.

Wide, steel, offset, push with underride, tow hooks incorporated into bumper and with full width steel shedder pan on top portion

UPDATED VERSIONS

Steel pusher assembly with narrow tube, tube push bar and push bar grip plates, c/w tow shackles, steel assembly bolted in place to aluminum profiles.

Steel pusher assembly with narrow 1/2" wall HD tube, bumper tube push bar, flush mount, with centre ring style pull cable bolted to aluminum upright.

Steel vertical blocks bolted to bumper with tow shackle option for pulling, bolted to aluminum uprights.

Tow shackles, with aluminum or steel vertical blocks bolted to aluminum uprights.

Aluminum, offset, push with underride, aluminum vertical blocks bolted to bumper and tow shackles.
